Acme Home Developer API: Reference v3

developer.acme-home.example/api/v3/autoschedule Last updated May 2024

GET /v3/devices/{device_id}/autoschedule/model

Returns metadata for the Auto-Schedule model currently deployed on the device.

Example response, SmartTherm Pro (AT-3200), firmware 5.4.2:

```
  "model_type": "gbdt_regressor",
  "n_estimators": 64,
  "max_depth": 4,
  "training_window_days": 21,
  "retrain_schedule": "daily@02:00",
  "label_source": "manual_setpoint_events",
  "last_trained_at": "2024-06-11T02:00:14Z",
  "firmware_version": "5.4.2"
```

GET /v3/devices/{device_id}/autoschedule/events

Returns the manual setpoint events used as training labels, newest first.
Each event: timestamp, previous_setpoint, new_setpoint, occupancy_state, source.

Rate limits: 60 requests per minute per API key.
